

DR. ALLAN PHILLIPS'
JOINT
FORMULA

Dr. Allan Phillips' JOINT FORMULA is a proprietary form of Glucosamine HCl and Silica. Glucosamine HCl may lessen the symptoms of osteoarthritis, aid in the lubrication of joints, and help strengthen connective tissue. Experts have suggested that Silica is a vital component for bone and cartilage formation.

Dr. Allan Phillips' JOINT FORMULA is a proprietary formula consisting of an advanced form of Glucosamine HCl and Silica. Glucosamine HCl is often referred to as "cellular glue." It is the main building block for semi-fluids that lubricate the joints and fill their cushioning sacks (bursa). Glucosamine HCl may lessen the symptoms of osteoarthritis, aid in the lubrication of joints and help strengthen connective tissue.

Two of the richest, most bio-available, natural sources of Silica are Horsetail and Bamboo Gum. Experts have suggested that Silica may provide connective tissue strengthening and antiarthritic action, because it is a vital component for bone and cartilage formation.

Dr. Allan Phillips' JOINT FORMULA was specifically formulated to relieve the pain and discomforts associated with inflammation of the bones, muscles and joints. The Glucosamine HCl found in **Dr. Allan Phillips' JOINT FORMULA** contains more elemental glucosamine per milligram than sulfate forms and it is more easily absorbed, making it highly effective.

The Silica in **Dr. Allan Phillips' JOINT FORMULA** aids in the production of collagen, the gluey complex that keeps joints malleable. **Dr. Allan Phillips' JOINT FORMULA** provides powerful nutritional support for joints by lubricating and nourishing damaged cartilage. Successfully proven effective by athletes, **Dr. Allan Phillips' JOINT FORMULA** is now available for maturing adults concerned about maintaining joint flexibility and comfort.
